Asha Mehta

Senior Backend Engineer

asha.mehta@example.com

Profile

Backend engineer focused on Python APIs, relational data models, and dependable service delivery. Comfortable owning a service from design to production support.

Technical skills

Python, FastAPI, PostgreSQL, pytest, Docker, AWS ECS, GitHub Actions

Experience

Senior Backend Engineer

Harborwell Systems | 2022 - Present

- Owned implementation of a Python FastAPI order-management API and deployed the service to production on AWS ECS.
- Designed PostgreSQL schemas, wrote application migrations, and improved queries used by the API.
- Wrote pytest unit and integration tests for endpoints, database transactions, and failed payment callbacks.
- Packaged the service in Docker and maintained its GitHub Actions release pipeline.

Backend Engineer

Ledgerfield Software | 2020 - 2022

- Integrated a third-party invoicing REST API using Python, with signed webhooks and idempotent event processing.
- Added retry handling for temporary partner failures and documented recovery procedures.

Selected project

Order reconciliation service

Built a background reconciliation worker that compared order events with payment records. Used PostgreSQL transaction boundaries and pytest fixtures to test duplicate deliveries.
