Daniel Brooks

Backend Engineer

daniel.brooks@example.com

Profile

Backend engineer working on service reliability and transactional applications. Experience implementing Python APIs and operating containerized services.

Technical skills

Python, Django REST Framework, PostgreSQL, unittest, Docker, Kubernetes, Prometheus, Grafana

Experience

Backend Engineer

Maplebridge Logistics | 2021 - Present

- Built Python APIs with Django REST Framework for shipment booking and dispatch workflows.
- Owned implementation and production deployment of the booking API on Kubernetes.
- Designed PostgreSQL tables and migrations, and tuned slow queries for dispatch screens.
- Wrote automated unit and API tests using Python unittest and Django TestCase.
- Created Prometheus alerts and Grafana dashboards for API errors and request latency.

Software Engineer

Ternway Services | 2019 - 2021

- Maintained internal Python reporting services and containerized scheduled jobs with Docker.
- Supported database migrations and reviewed operational runbooks before releases.

Selected project

Shipment event replay

Created an internal tool to replay failed shipment events after an incident. Added dry-run output and audit records so operations could inspect the proposed changes.
